

Fiera Capital Diversified Alternatives Fund¹

Investor Class (FCARX)

FEBRUARY 2017 COMMENTARY

The Fiera Capital Diversified Alternatives Fund (the “Fund”) returned 0.64% net of all fees and expenses for the month of February. All of the Fund’s sub-advisors were profitable during the month. Equity market neutral trading and long positions in global equity indices contributed positively to performance, while currency trading detracted.

Since inception in July 2014, the Fund had a net return of 0.23%. During this time, it outperformed the HFRX Global Hedge Fund Index (-1.87%) by 2.10% and underperformed the MSCI World Index (9.99%) by 9.76%.

1 The Fiera Capital Diversified Alternatives Fund was formerly known as the Rothschild Larch Lane Alternatives Fund as of July 13, 2016. The Fund continues to be managed with the same investment approach and strategy.

2 Fee waivers are contractual and in effect until February 28, 2018. For the Investor Share Class only, there are two class specific fees: 12b-1 fee of 0.25% and Shareholder Servicing fee of up to 0.10%.

Fiera Capital Diversified Alternatives Fund

Investor Class (FCARX)

To determine if this Fund is an appropriate investment for you, carefully consider the Fund's investment objectives, risk factors, charges, and expenses before investing. This and other information may be found in the Fund's summary and full prospectuses, which may be obtained by calling 844-755-3863 or by visiting the website at www.fierausa.com/investment-strategies/alternatives/altsfund. Please read the prospectus carefully before investing.

The Fiera Capital Diversified Alternatives Fund is distributed by SEI Investments Distribution Co, which is not affiliated with the adviser or any of its affiliates nor with any of the sub-advisers.

The MSCI World TR Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. The HFRX Global Hedge Fund Index is designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies; including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage, and relative value arbitrage. The strategies are asset weighted based on the distribution of assets in the hedge fund industry. The indexes discussed herein (the "indexes") are not subject to any of the fees or expenses to which the Fund would be subject. References to the indexes are for comparison or discussion purposes only and are not a projection, prediction or guarantee of performance. It should not be assumed that the Fund will invest in any specific securities that comprise any of the indexes. Indices are unmanaged and its returns do not reflect fees, expenses, or sales charges. One cannot invest directly in an index.

Investing involves risk, including possible loss of principal. The Fund may invest in bonds. Bonds and bond funds are subject to interest rate risk and will decline in value as interest rates rise. The Fund uses investment techniques that are different from the risks ordinarily associated with equity investments. Such techniques and strategies include the use of derivatives, short sales, and leverage and investments in commodity-linked securities and foreign securities. Derivatives are often more volatile than other investments and may magnify the Fund's gains or losses. With short sales, the Fund risks paying more for a security than it received from its sale. Short sale losses are potentially unlimited and the expenses involved with the shorting strategy may negatively impact the performance of the Fund. In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, or from social, economic, or political instability in other nations. Commodity linked securities can be more volatile and less liquid than the underlying commodities themselves and the use of leverage may accelerate the velocity of potential losses. The Fund uses a multi-manager structure. It is possible that the investment styles used by a Sub-Adviser in an asset class or investment strategy will not always be complementary to those used by others, which could adversely affect the performance of the Fund.
